- In the years to come, perfect and become a professional programmer and achieve success in your career.

PROJECTS

July/2023 - **August/2023**

Name of project: Fruit Shop

Personal project

Number of participants: 1

Position: Programmer

Description:

- Fruit Shop specializes in selling fresh fruit products, where buyers can choose the type of fruit they want to buy. With products from imported to domestic products, customers can freely shop with reasonable prices on the store's products.
- Buyer must add to cart and pay seller (3rd party (site owner) after completing shopping on our store.

Technology used:

- Develop front end technology with HTML, CSS, Bootstrap, combined with ReactJS to connect with back end through HttpClient called API
- Develop back end using java to write, use Spring Framework, connect database via Spring Data JPA and interface user interface through RESTful API to data feedback to user interface.
- Use JWT for authentication and authorization while connecting front end/back end.
- Use native query to manage product management functions, search products and get cart and transaction history.
- And use PayPal to pay for products.
